## **DI831**

## ABB Ability™ System 800xA® hardware selector

The DI831 is a 16 channel 48 V d.c. digital input module for the S800 I/O. The input voltage range is 36 to 60 V d.c. and the input current is 4 mA at 48 V d.c.). Each input channel consists of current limiting components, EMC protection components, input state indication LED and optical isolation barrier. The module cyclically performs self-diagnostics. Module diagnostics include:

- Process power supply supervision (results in a module failure, if detected)
- Event queue full
- Time synchronization missing.

The input signals can be digitally filtered. The filter time can be set in the range 0 to 100 ms. This means that pulses shorter than the filter time are filtered out and pulses longer than specified filter time get through the filter.

## **Features and benefits**

- 16 channels for 48 V d.c. inputs with current sinking
- 2 isolated groups of 8 channels with voltage supervision
- Input status indicators
- Sequence of event (SOE) functionality
- Shutter filter
